## *Rescue Laser Flare Magnum (red signal)*

### Supplemental Emergency Rescue & Signaling Device

- P/N: 3RK00243
- Can be included in LifeRaft Survival Kit
- Superior Nighttime & Daytime Signaling
  - Up to 20 miles nighttime
  - Up to 3 miles daytime
- Waterproof
  - 80 feet (24 m)
- Performance
  - 72 hours on two AA Batteries
  - Equivalent to 4,320 one-minute pyrotechnic flares
- Specifications:
  - DIMS: 6" long
  - Weight: 5.6 oz.

*"Perhaps one of the best night signals invented"* – US Navy  
Aviation Survival Gear Field Test

Although the signaling capability of the Rescue Laser emergency rescue and signaling device remains effective for signaling SAR aircraft, the power levels (brightness) of the Rescue Laser is reduced by one thousand times, this is a level where visual flight acuity is not affected.

The laser power level illuminating the cockpit and hitting the pilot's eye from the Rescue Laser is about one trillionth of a watt. This power level is very low because the Rescue Laser begins with a very small amount of laser light and then creates a very long 2 dimensional fan (line) of light further reducing the power density of the light. This level can be easily detected, but will not obscure pilot vision in any way.

Concerned about using a  
Rescue Laser Flare?

H.R. 386 "Securing Aircraft Cockpits Against Lasers Act of 2011" passed the U.S. House of Representatives on February 28, 2011 and is moving on to the Senate for approval. The bill specifically **exempts** *"an individual using a laser emergency signaling devices to send an emergency distress signal."*
